

Executive Overview

100% Wireless network. Faster installation.
Get bandwidth from 1 MPs to 1Gps.

Business Only Broadband (BOB) is the culmination of experience, technology, the recognition of the ever growing bandwidth requirements of your business and the need for true network diversity. Your company's data and internet network is a key business asset that supports mission critical communications to clients, vendors and employees and the productivity of your business. Our management team, which has over 100 years of combined industry experience, has been at the forefront of alternative local network industry from the late 80's to today. BOB's networks are designed and engineered specifically to meet the Internet, Metro Ethernet and Business Continuity network needs for today's business environment.

BOB's management team were pioneers in the fiber optic network space and were part of the team that deployed the nations first competitive access fiber optic network in the late 1980s as a part of Chicago Fiber Optics which later became Metropolitan Fiber Systems (MFS). Over the next 15 years we played a major role in the deployment of the national and global fiber optic infrastructure. In the early 2000s the BOB management team turned our focus to the wireless broadband space and was the team that deployed the first wireless broadband network in North America. This experience laid the foundation for BOB.

In 2005 BOB was formed with the concept of building wireless broadband Ethernet networks that would deliver service from T-1 to gigabit capacity, perform at the level of fiber optic infrastructure and have no common point of failure with the local exchange network. Over the past four years we have built the premier wireless broadband networks in Chicago and New York to provide your business with the following features and benefits:

| Network Feature | Customer Benefit |
|--|---|
| >> More bandwidth for less. | >> Your employees will be more productive and the interface to your clients will be faster while you continue to meet your budgetary requirements. |
| >> 100% Wireless. No common point of failure with landline based fiber or copper networks. | >> The BOB Co-primary design ensures that your mission critical applications are always available to your customers, vendors and employees. |
| >> The largest fixed-wireless broadband networks in the Chicago, New York and New Jersey metro area. | >> More coverage means more availability and options to connect to your branch offices, vendors, data providers and data centers. Once you're on the BOB network we can connect you to wherever your business needs dictate rapidly allowing you to be more nimble than your competition. |
| >> Latest Ethernet, wireless and Cisco technology deployed. | >> By deploying the latest technology BOB has built the most cost efficient network infrastructure available, these cost benefits are passed on to our customers which ensures your budgetary needs are met. |
| >> Scalable bandwidth from T-1 to 1 Gbps. Customers can increase bandwidth to fit their business requirements in days with one call. | >> The BOB wireless technology can be upgraded remotely within 24 hours notice, this lets you manage your bandwidth on a real time basis to meet your ever changing business needs. In addition it avoids additional costly additional installation charges. |
| >> 24 hour a day 365 days a year network monitoring and management. | >> World class service when you need it, your data network never sleeps and BOB will be there whenever you need us. |
